

AATi Commercial

PROJECT CASE STUDY

January 2016

Epping Forest District Museum

Customer: Coniston Limited

Architect: Hawkins Brown

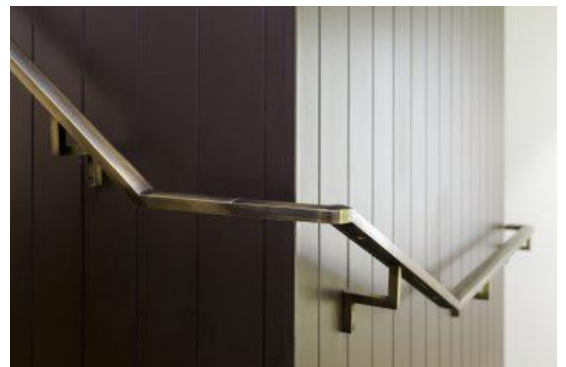

Surrounded by listed buildings dating back to the Georgian era, Epping Forest District Museum was by no means going to have an easy transformation.

AATi worked closely with Architects Hawkins Brown to design and develop a bespoke anti-slip floor plate taking into consideration the limitations of the existing buildings and regulation requirements. Together we cleverly modified an existing design to alleviate water ingress over the door threshold.

As seen below, AATi provided a complete anti-slip solution for the threshold and carefully machined the castings from a template provided by Coniston.

Also FSE Foundry (part of the FSE Group www.fsegroupp.co.uk) supplied cast Nickel Bronze Handrails and Brackets to the museum (pictured below right). For further FSE projects please visit www.fsefoundry.co.uk

FSE Foundry Cast Nickel -
Bronze Handrails & Brackets.

- AATi FP2 Cast Metal Floor Plate
incorporating special water bar feature.
