

AATi Commercial

PROJECT CASE STUDY

November 2015

High Wycombe Leisure Centre

Customer: Willmott Dixon Construction Ltd

Architect: Space Place

AATi supplied cast metal anti-slip stair nosings for the newly renovated High Wycombe Leisure Centre.

The leisure centre is packed with activities and now includes;

- an eight lane 50 metre pool with moveable floor and sub-aqua dive pit
- 20 metre by 8 metre learner pool with moving floor 1.2 metre deep
- splash zone for young children
- 10 metre climbing wall
- 150 station gym
- dance studios
- 12 court sports hall
- bowls (four rink)
- steam room and sauna
- two squash courts
- two party or meeting rooms
- café

The nosing selected was AATi type – SN9/55 in Cast Iron zinc plated black (pictured above).

This nosing is widely used across commercial developments alike, due to the silicon carbide granules cast into the metal matrix of the wearing surface; this ensures high anti-slip and also anti-wear performance and assists with the products longevity.
