Project case study

2006

Oxford Circus Station

Client: London Underground

Contractor: Metronet Rail BCV Ltd

Product: SN93/SL3/140 and '/280'

Material: Nickel Bronze

SN93/SL3/140 Cast Nickel Bronze nosing

Oxford Circus Station is one of the busiest London Underground stations with a staggering 98 million passengers visiting annually!

The station exhibits 4 street entrances to accommodate the 500 thousand Oxford Street shoppers per day (not including the London commuters) and has become one of the most congested intersections.

Oxford Circus serves three busy London Underground lines including; Central, Bakerloo and Victoria lines.

To cope with the sheer impact of the enormous and frequent flow of passengers and shoppers, there was only one stair nosing company capable of managing this – AATi.

Seen on all street entrances and internal staircases, AATi type SN93/SL3/140 + SN93/SL3/280 cast metal anti-slip stair nosings are featured throughout and also include London Underground corporate Blue anti-slip resin inserts.
