

AATi Rail

Project case study

Pre 1990

Southfields Station

Client: London Underground

Contractor: Ardmore Construction Ltd

Product: SN3/HDLT/280

Material: Cast Iron

Southfields is a London Underground station in Southfields in the London Borough of Wandsworth.

The station is on the District line between East Putney and Wimbledon Park stations and is located on Wimbledon Park Road

Southfields is the most convenient station from which to reach the All England Lawn Tennis and Croquet Club, venue of the Wimbledon Tennis Championships; Wimbledon Park station is slightly closer as the crow flies but requires a longer walk.

AATi supplied the original Heavy Duty London Transport (HDLT™) stair nosings for Southfields. AATi type SN3/HDLT/280 cast Iron anti-slip stair nosings were installed in 1998 and if you take a visit to the station today, you will see them still functioning effectively!
