## PROJECT CASE STUDY

April 2017

### Tate St Ives

**Customer: BAM Construction Ltd**

**Architect: Jamie Fobert Architects**

Situated within this small historic town alongside the Cornish coast, Tate St Ives gallery has experienced a substantial expansion almost doubling its size!

In 2015 there were over 210,000 visitors to the gallery so with this in mind and with the gallery expansion, it was an obvious choice selecting an appropriate stair nosing to cope with the passenger flow and be resilient to the conditions. AATi supplied its SN30/60 cast Iron anti-slip stair nosings. Compact in size, this profile exhibits the same longevity and hard wearing/heavy duty characteristics as our larger profile nosings.

The renovations concluded a new contemporary gallery, education spaces, transition spaces and offices. The gallery is also in close proximity to the Barbara Hepworth Museum and Sculpture Garden, displaying some of Barbara's finest sculpture work. For the aspiring artist; St Ives must be the top places to view this summer!
